

ABSTRACT

A protective holder for use with a paintbrush. The holder has a flexible sleeve that is configured to be snugly positioned about a substantial portion of a paintbrush body. The sleeve has an aperture through which the handle of a brush may extend, and may also include absorbent material that captures liquid that dribbles down from the applicator portion of a paintbrush when the paintbrush is held vertically. The holder also has a protective, segmented skirt that is operatively connected to the sleeve and whose segments or panels may be selectively moved between a protective storage position where the skirt substantially encircles the applicator portion of a brush, and a protective use position where the skirt substantially encircles the handle of a brush. The holder also may have a fastener to maintain the skirt in either of its protective positions.
